

1. redo last command but as root

```
sudo !!
```

2. open an editor to run a command

```
ctrl+x+e
```

3. create a super fast ram disk

```
mkdir -p /mnt/ram  
mount -t tmpfs tmpfs /mnt/ram -o size=8192M
```

4. don't add command to history (note the leading space)

```
ls -l
```

5. fix a really long command that you messed up

```
fc
```

6. tunnel with ssh (local port 3337 → remote host's 127.0.0.1 on port 6379)

```
ssh -L 3337:127.0.0.1:6379 root@emkc.org -N
```

7. quickly create folders

```
mkdir -p folder/{sub1,sub2}/{sub1,sub2,sub3}
```

8. intercept stdout and log to file

```
cat file | tee -a log | cat > /dev/null
```

bonus: exit terminal but leave all processes running

```
disown -a && exit
```
